May be ordered with key override here; Satin ... Page Active Last Checked: 16 days ago OwnerRez can automatically integrate codes for your Kaba/Oracode door locks. Each time a booking is created, OwnerRez will automatically obtain the door lock code without you lifting a finger! If the booking moves properties or changes dates, a new code is obtained so that the guest will always be sent a valid code for their stay. If you want to use Kaba/Oracode door locks, all the details are below. Setting Up the Integration To get started, go to Settings > Door Locks then click the Kaba/Oracode button to connect to the door lock you have. The next screen allows you to configure the Site Name you set up with Kaba/Oracode. IMPORTANT NOTE: Kaba/Oracode integration requires your Kaba account to be in PM mode (10+ locks required, not a homeowner site like A-Z Live). If you don't have that many, this won't work for you. We are collecting a list of folks with less than 10 locks to see if Kaba will add support for this scenario at some point if we get enough requests. If this applies to you, email us and we'll add you to the list: help@ownerreservations.com Once the record is created, you will see a page showing the integration and a Property Mapping section. This is where you'll enter the Lock ID provided to you by Kaba for each of your properties. To complete setup, follow the configuration and property mapping directions outlined in the Door Lock Overview. User Levels: Check In/Out Times, Long Term Bookings Kaba does not support assigning check-in or check-out times directly. Instead, each code is associated with a "user level" which has a specified start/end time. You must first have the user level configured on the Kaba side, then come to OwnerRez and configure it. Once configured, OwnerRez will evaluate the booking check in/out times against the default property times and use the appropriate code. Kaba only supports daily codes for bookings 30 days or less. For long term bookings, select the long term user level to be used for bookings longer than 31 days. Codes will start on alternate Mondays and end alternate Sundays. Code Generation and Capabilities Now that you have lock integration configured, let's look at your bookings and the code generation side. Format: 6 digit codes are generated automatically by the lock based on stay datesSetting Codes: Kaba does not support setting codes, only the auto generated code. Generating codes by guest phone number or random numbers are not supported.Updating Dates: Kaba does not support modifying the dates for a given code. If you change the dates for a booking, a new code will be generated -- remember to send the updated code to the guest!Canceling Codes: Kaba does not support canceling codesMultiple Locks on one Booking: Each Kaba lock associated with the booking property will be programmed with its own unique code Quirks: Checkin/out times are not directly supported. Instead, Kaba has hardcoded "user level" values with a specific start/end time. You can only pick one for early/late/both instead of going by the actual time set on the booking. Long term bookings (> 31 days) use a special long-term user level that starts on alternate Mondays and ends alternate Sundays instead of using specific days. So the codes for a long term guest will change over the length of their stay. Only 3 codes can be generated for a given date range. If bookings are made and canceled enough times, you'll run out of codes. This is very unlikely to happen in real use. Codes will be automatically generated for new bookings, or you can manually generate codes for existing bookings for a single booking or update many bookings at once by using our batch update tool. help@ownerreservations.com • (206) 651-4090 © Copyright 2009-2022 OwnerRez, Inc. Where secure, remote access is made simple.For additional information on the Oracode system, or other Kaba lodging products, please click here. Oracode Keyless Lock Benefits for the OwnerGrants unique access up to 128 usersSaves time and money.No more key management;(no keys to mail, replace, no more re-keying the cylinder)Easy installationVery low maintenanceIncreased securityCodes can be generated days, months, or years in advanceOracode Keyless Lock Benefits for the UserNo need to make arrangements to meet guests, codes can be given verbally, by fax, or by emailTime specific code based on arrival date and expires upon guest departureGuest check-in is not required as there are no keys to pick-up or drop-offLong-term guests have the option to change the code to a specific number We offer home infusion therapies, including: IVIG, SCIG, IV Antibiotics, TPN, Pain Management, IV Hydration, Steroid Therapy, Enteral Therapy & more. Medeco locks are high security locks with mechanical and keyed options. Types of locks include cylinders, deadbolts, knobs and levers, padlocks and handlesets. Some products are patented. Read on to see what makes these locks and Medeco Lock Company stand out.About Medeco LocksMedeco has been around for years, and has earned a name in the lock and key business world. It was founded in 1968, and has been a leader in locks and locking systems for decades. The company supplies locks to retail businesses, wholesale businesses, governments, banking institutions, schools and hospitals. The locks are made in Virginia and distributed around the world. The company is part of the ASSA ABLOY Group, which is a world leader in the manufacturing and supplying of locks.Innovative TechnologyInnovative technology ensures the utmost in security. This is especially evident in the banking industry, where keys are programmed to only fit certain locks within a specific period of time. Medeco XT locks are a specific type of lock that can track where and when the locks are accessed. A report is generated to document authorized and unauthorized activity. Features of these specialized locks can include PIN authorization, customizable alerts, time delays for safes and preset expirations upon access.Parking and TransitParking meters are used in parking lots in downtown areas, as well as at sporting events, performance arenas and college campuses. Monitoring the pay system of these meters is important. Medico's Nexcon tools secure the revenue made with parking meters. The keys are programmed to work on certain locks at designated times. Components of the system include electronic locks, programmable keys and lock management software with no hard wiring.Health CareSecure locking systems are crucial in hospitals, retirement homes, medical offices and pharmacies to protect patients, residents, equipment, labs and medicines. These locking systems have efficient software to generate reports based on lock usage. System audits monitor access and attempts. There is a remote programming feature and Bluetooth options for smartphones. These aim to prevent security vulnerability within medical facilities.Other Uses and DetailsMedeco locking systems and intelligent keys work for schools and colleges, too. They keep records secure and monitor who enters buildings. Key controls prevent unauthorized service centers from duplicating keys. The locks are carefully constructed to resist physical damage, like prying and sawing. They are also designed to withstand someone picking or drilling the lock. A secure locking system can save a company money by preventing theft and losses in the commercial industry. MORE FROM QUESTIONSANSWERED.NET
